

AssetBuilder

AN INTUITIVE 3D MODELLING TOOL TO CREATE DIGITAL TWINS OF ASSETS

NEW, EFFICIENT SOLUTIONS FOR 3D

With the digitalization of the oil and gas industry, 3D models are becoming a prerequisite for maintenance and inspection work. The ability to access 3D models on location reduces risk, saves time, increases productivity and is cost-efficient. Although 3D technology is available, creating 3D models for physical assets until now has been limited to specialized CAD programs and technical engineering programs that are costly, time consuming and complicated.

EASY AS 1, 2, 3

Building a digital twin in AssetBuilder is done in three main steps:

- Create the base of your asset
- Configure parameters
- Click together the parts you need

Your 3D model is saved online, ready to view, edit and export. The files are small and ideal for embedding in reports. The 3D models are directly compatible with PDFs, PowerPoint, Word documents and other CAD programs.

SAVE MONEY & INCREASE PRODUCTIVITY

AssetBuilder is intuitive in design: components are predefined and the different parts click together, adjusting to variables such as wall thickness, diameter and component placement. A 3D model of an asset can be created in minutes directly in your browser. Work in the cloud, reduce risk, save time, increase productivity and save money: AssetBuilder is the answer to finding efficient 3D solutions for inspection and maintenance.
